

## EMERGENCY PREPAREDNESS

PRIORITY	ITEM	QUANTITY	UNIT COST	EXTENDED COST	LABORATORY	JUSTIFIED
1	Enhanced instrument interfaces for the LIMS. This will allow us to capture all the addition fields the original LabWorks interface does not.	1	~15K		CT/ENV	This would allow all fields to be brought into the LIMS thus making is a single final respository for data.
2	MERX total Mercury analyzer.	1	~30K		ENV	Equipment is design for high throughput making it idea for large monitoring programs such as NIH. Significantly more sensitive than ICP/MS. State of the art software, LIMS interfaceable. Rugged for challenging matrices. Expandable to speciation of methyl mercury.
3	Toploading Balance with PC connectivity	2			CT/ENV	Would provide direct transfer of weights into LIMS without transcription errors.
